PUBLIC REVIEW PERIOD:

March 29, 2018 - April 18, 2018

This Negative Declaration and Initial Study Checklist have been prepared pursuant to the California Environmental Quality Act (CEQA) (Public Resources Code, Section 21000, et seq.) and the State CEQA Guidelines (California Code of Regulations, Section 15000, et seq.).

Written comments regarding this Negative Declaration shall be made to the Lead Agency, listed above, prior to 5:00 p.m. on the last day of the Public Review Period.

SECTION I. INTRODUCTION

1. Description of project:

The Applicant is requesting to amend the General Plan Land Use Designation for 10221 Downey Avenue to Low-Medium Density Residential from Low Density Residential and change the Zoning Designation to R-2 (Two-Family Residential) from C-P (Professional Office). At 10303 Downey Avenue, the Applicant is proposing to amend the General Plan Land Use Designation to Low-Medium Density Residential from Low Density Residential and change the Zoning Designation to R-2 (Two-Family Residential) from R-3 (Multiple-Family Residential). Although no development is proposed at this time, approval of this request will allow up to 14 units to be built on the project site.

2. Project Site:

The project sites encompass two parcels addressed 10221 Downey Avenue and 10303 Downey Avenue, both located within the City of Downey. 10221 Downey Avenue is an 18,000 square-foot, rectangular lot located south of Florence Avenue and to the east of Downey Avenue. The parcel has a General Plan Land Use Designation of Low Density Residential and a Zoning Designation of C-P (Professional Office). The site is developed with a one-story, single-family residence that is approximately 1,700 square-feet in size and was built in 1952. 10303 Downey Avenue is located to the south of 10221 Downey Avenue and also has an area of 18,000 square-feet. This parcel has a General Plan Designation of Low Density Residential and a Zoning Designation of R-3 (Multiple-Family Residential). The site is improved with a one-story, single-family residence that is approximately 1,405 square-feet and was built in 1951.

3. Surrounding Properties:

The subject properties are surrounded by multiple-family residential uses to the south that are zoned R-3 (Multiple-Family Residential) and have a General Plan Designation of Medium Density Residential; a commercial office building to the north that is zoned C-P (Professional Office) and has a General Plan Land Use Designation of Office and fronts Florence Avenue. To the east, there is a mix of single-family and multiple-family developments. This area is zoned R-1 10,000 (Single-Family Residential) and has a General Plan Land Use Designation of Low Medium Density Residential. The single-family residential uses directly west of the project sites are zoned R-3 (Multiple-Family Residential) and have a General Plan Designation of Low Density Residential. Downey Avenue is a fully-improved, four-lane street and is predominantly developed with multiple-family residential development to the south of this site.

4. City Characteristics:

The City of Downey is 12.8 square mile community that is located in the southeastern part of Los Angeles County. The State of California Department of Finance estimated that City's population is 113,832, as of January 1, 2017. The City of Downey is located about 12 miles southeast of downtown Los Angeles and is bounded by: the Rio Hondo River on the west; Telegraph Road on the north; the San Gabriel River on the east; and Gardendale Street and Foster Road on the south. Cities bordering Downey include: Pico Rivera on the north and Santa Fe Springs on the northeast, Norwalk on the east, Bellflower and Paramount on the south, South Gate on the southwest and west and

Commerce on the northwest.

Regional access to and from the City of Downey is provided by the Santa Ana (I-5) Freeway; Glen Anderson Freeway (I-105) Freeway; the San Gabriel River Freeway (I-605) Freeways; and the Long Beach Freeway (I-710); MTA Green Line Light Rail passenger train services at the Lakewood Boulevard station, and various Metro Bus Lines that connect throughout the City.

The City of Downey is a Charter City with most municipal services being provided directly by the City. This includes City Police and Fire services, as well as, Planning, Building, Housing, Economic Development, Parks and Recreation, Library, and Public Works. Additionally, the City of Downey oversees operation of the Downey Civic Theater, the DowneyLINK Transit System, and the Farmer's Market.

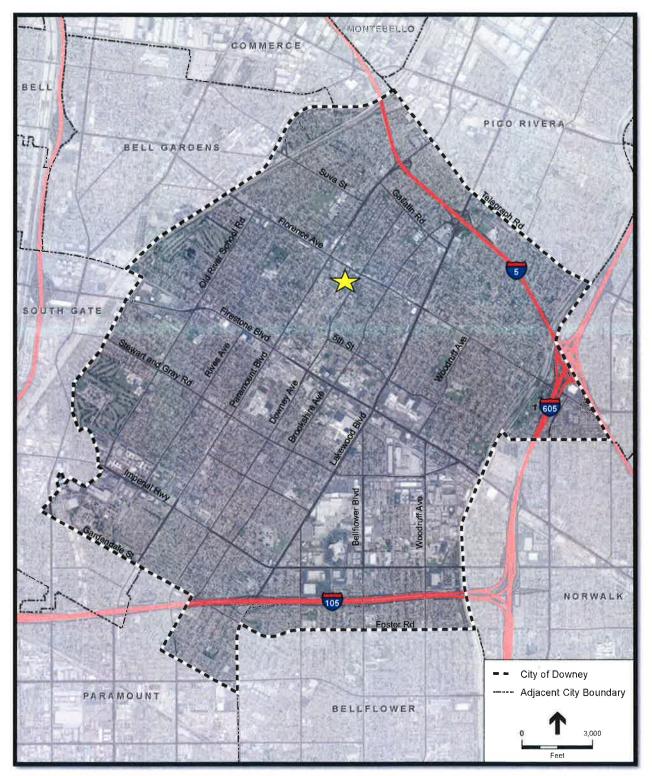

5. Other public agencies whose approval is required: (e.g., permits, financing approval, or participation agreement.)

None

SECTION III. INITIAL STUDY CHECKLIST AND ENVIRONMENTAL EVALUATION

This section analyzes the potential environmental impacts which may result from the proposed project. For the evaluation of potential impacts, the questions in the Initial Study Checklist are stated and answers are provided according to the analysis undertaken as part of the Initial Study. They outline the following issues:

 Aesthetics 10. Mineral Resources 2. Agriculture Resources 11. Noise 3. Air Quality 12. Population and Housing 4. Biological Resources 13. Public Services 5. Cultural Resources 14. Recreation 6. Geology and Soils 15. Transportation and Traffic 7. Hazards and Hazardous Materials 16. Utilities and Service Systems 8. Hydrology and Water Quality 17. Mandatory Findings of Significance 9. Land Use and Planning

The analysis considers the project's short-term impacts (construction-related), and its operational or day-to-day impacts. For each question, there are four possible responses. They include:

- 1. **No Impact.** Future development arising from the project's implementation will not have any measurable environmental impact on the environment and no additional analysis is required.
- 2. <u>Less Than Significant Impact</u>. The development associated with project implementation will have the potential to impact the environment; these impacts, however, will be less than the levels or thresholds that are considered significant and no additional analysis is required.
- 3. <u>Potentially Significant Impact Unless Mitigated</u>. The development will have the potential to generate impacts which will have a significant effect on the environment; however, mitigation measures will be effective in reducing the impacts to levels that are less than significant.
- Potentially Significant Impact. Future implementation will have impacts that are considered significant, and additional analysis is required to identify mitigation measures that could reduce these impacts to less than significant levels.

| | | Potentially Significant Impact - EIR Analysis Is required | Potentially Significant Unless Mitigation Incorporated | Less Than Significa nt Impact | No Impact |
|----|---|---|--|---|--------------|
| 1. | AESTHETICS. Would the project: | | | | |
| a. | Have a substantial adverse effect on a scenic vista? | | | | |
| b. | Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | | | | \boxtimes |
| C. | Substantially degrade the existing visual character or quality of the site and its surroundings? | | | | |
| d. | Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | | | | |
| | | | | | |

| Re | sponse: | | | | | | |
| env | and b): No impact. The City of Downey, which is located vironment. There are no scenic vistas, scenic resources or scelle from within the City. No impact would occur. | | | | | | |
| deg hav The imp | (c): No Impact. The request to change the General Plan Designation and Zone of the existing sites will not degrade the existing visual character or quality of the site and its surroundings. If approved, the applicant will have to submit development plans that comply with the development standards of the Downey Municipal Code. The standards adopted within the Municipal Code are intended to regulate development so as to not negatively impact the visual character of the site nor its surroundings. | | | | | | |
| Do | : No Impact . The future R-2 development of the site must co wney Municipal Code. Pursuant to D.M.C. Section 9520.06, a d/or shielded as not to direct light on any street or abutting properties. | all outdoor ligh | | | | | |
| Mit | igation Measures: | | | | | | |
| No | ne Needed | | | | | | |
| 2. | AGRICULTURE RESOURCES. In determining whether imparent environmental effects, lead agencies may refer to the Californ Assessment Model (1997) prepared by the California Departruse in assessing impacts on agriculture and farmland. Would | nia Agricultura ment of Conse | l Land Evalua | tion and Sit | е | | |
| a) | Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | | | | ⊠ | | |
| b) | Conflict with existing zoning for agricultural use or a Williamson act contract? | | | | | | |
| c) | Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | | □ 0 | | \boxtimes | | |
| d) | Result in the loss of forest land or conversion of forest land to non-forest use? | | | | | | |
| e) | Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use? | | | | | | |

| Re | sponse: | | | | | |
| (a, b and e): No impact. The City of Downey is an urbanized area that is mostly built out with only infill development potential. There are no agricultural lands within the City's boundaries. The project will have no impact on converting Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use. Furthermore, the City's General Plan (Vision 2025) does not include provisions for agricultural uses in the future. While the City does have a variety of zoning districts, agricultural uses are only allowed in the Open Space (O-S) zone. The subject site is neither within or adjacent to the O-S zone. Therefore, no impacts to agricultural resources would occur with implementation of the proposed project. | | | | | | |
| po | : No impact. The City of Downey is an urbanized area that tential. There are no forest or timberland lands within the Cit offlict with existing zoning for, or cause rezoning of, forest land, aduction. ⁴ | y's boundarie | s. Therefore | the projec | t will not | |

⁴ As defined in Government Code Section 51104(g)

SECTION III - ENVIRONMENTAL EVALUATION

Potentially Significant Impact - EIR Analysis Is required Potentially Significant Unless Mitigation Incorporated Less Than Significa nt Impact

No Impact

Response:

(a): No impact. The proposed project is located in the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAQMD is the regional agency responsible for air quality regulations within the SCAB including enforcing the California Ambient Air Quality Standards (CAAQS) and implementing strategies to improve air quality and to mitigate effects from new growth. The SCAQMD, in association with the California Air Resources Board (CARB) and the Southern California Association of Governments (SCAG), is responsible for preparing the Air Quality Management Plan (AQMP) that details how the region intends to attain or maintain the state and federal ambient air quality standards. The 2016 AQMP includes the integrated strategies and measures needed to meet the National Ambient Air Quality Standards (NAAQS). SCAQMD recently approved on March 3, 2017 the 2016 AQMP that demonstrates attainment of the 1-hr and 8-hr ozone NAAQS as well as the latest 24-hr and annual PM2.5 standards. Consistency with the 2016 AQMP is determined when a project: (1) does not increase the frequency or severity of an air quality standards violation or cause a new violation; (2) is consistent with the growth assumptions in the AQMP; and (3) does not conflict with the implementation of any of the control measures or strategies adopted in the AQMP. The purpose of the AQMP is to bring an area into compliance with the requirements of Federal and State air quality standards. The consistency review is as follows:

- 1. The project will result in short-term construction related pollutant emissions less than the CEQA significance emissions thresholds established by the SCAQMD, as determined in Response No. 3(b) below. Therefore, the project will not result in an increase in the frequency or severity of an air quality standards violation and will not cause a new air quality standard violation.
- 2. The potential residential development could consist of a maximum of 14 units. The emission impacts of 14 units are consistent with the projections of the 2016 AQMP, which continues to decrease within Los Angeles County.
- 3. The pollution control strategies of the 2016 AQMP are mainly concerned with technologically based means of reducing emissions from mobile and stationary sources. Many of the control strategies are plans to develop regulations and rules that will specify future requirements for activities to reduce pollutant emissions. Examples of control strategies include increased industrial PM emissions control through baghouses, wet scrubbers, and other devices, volatile organic compounds (VOC) reductions in lubricants, and the light- and medium-duty vehicle high-emitters identification program to reduce NO_x, and VOC emissions. There are no control strategies that are applicable to the project.

Based on this consistency analysis, no impact is anticipated relating to conflicts with the Air Quality Management Plan.

(b and c): Less than significant impact. Short-term air quality impacts can be anticipated from construction activities, although the proposed project does not anticipate violating any air quality standard or contribute substantially to an existing or projected air quality violation. All construction equipment is required to comply with CARB reguations, and construction activity is subject to the SCAQMD regulations. The California Clean Air Act, signed into law in 1988, established the CAAQS; all areas of the state are required to achieve and maintain the CAAQS by the earliest practicable date. Regions of the state that have not met one or more of the CAAQS are known as nonattainment areas, while regions that meet the CAAQS are known as attainment areas. The proposed project would be located in the Los Angeles County sub-area of the SCAB. Los Angeles County is designated as a state nonattainment area for O₃, PM_{2.5}, and lead. The SCAQMD publishes thresholds of significance for these pollutants.⁵

⁵ South Coast Air Quality Management District, Air Quality Significance Thresholds, March 2015

| CEQA INITIAL STUDY – PLN-17-00145 | SECTION III - | ENVIRONME | NTAL EVAL | UATION | | |
|--|---|--|---|-------------------------|--|--|
| | Potentially Significant Impact - EIR Analysis Is required | Potentially Significant Unless Mitigation Incorporated | Less Than Significa nt Impact | No Impact | | |
| In addition to the construction equipment operating at the site, the project will involve grading to prepare the site for construction of the buildings. In order to avoid significant impacts by stock-piling or transporting this soil, fugitive dust measures shall be addressed. This activity is subject to the regulations under SCAQMD's Rule 403 for fugitive dust control, which includes BMP's to mitigate fugitive dust from construction sites. Furthermore, the Final Environmental Impact Report (FEIR) that was prepared for the Downey Vision 2025 Comprehensive General Plan Update, which was certified on January 25, 2005, includes several mitigation measures intended to reduce air quality impacts from construction ⁶ . Since these mitigation measures are already required on the construction, no additional mitigation is required. | | | | | | |
| (d): Less than significant impact. Sensitive receptors hospitals, churches, rehabilitation centers, and long-term of the area indicates that sensitive receptors are within ¼ multiple-family dwelling units does not create significant so | are facilities (i.e. as ile of the project si | ssisted living fa te. Neverthele | cilities). A r ess, the ope | review of eration of | | |
| (e): No impact. Projects that involve offensive odors may be a nuisance to a wide number of neighboring uses, including businesses, residences, sensitive receptors, and public areas. For example, heavy industrial projects, livestock farming operations, and food packaging operations involving high concentrations of vinegar or spices can create odors that have long term impacts to the neighbors. The future residential development of this site is a residential use, and will therefore not emit any offensive odors. | | | | | | |

| d. | the | located on expansive soil, as defined in Table 18-1-B of e California Building Code, creating substantial risks to life property? | | | | |
| e. Re | se _l wh | ve soils incapable of adequately supporting the use of ptic tanks or alternative wastewater disposal systems were sewers are not available for the disposal of water? | | | | |

(a1 through a3 and c): Less than significant impact. The City of Downey is not located within an Alquist-Priolo Earthquake Fault Zone, as indicated on the zone map issued by the State Geologist for the area, nor is it expected to involve strong seismic ground shaking or seismic-related ground failure. The applicant is not currently proposing development on the project sites. Future construction on the site will not involve significant changes in topography. Nonetheless, the City of Downey is located in an area considered to be seismically active, as is most of Southern California. Major active fault zones are located southwest and northeast of the City, with the Whittier fault being the fault with the greatest potential to impact the project site. It is located approximately 4-5 miles northeast of the project site and is capable of a maximum moment magnitude of 7.2. Since the site is not located within the boundaries of an Earthquake Fault Zone and no faults are known to pass through the property, surface fault rupture within the site is considered unlikely. Impacts are considered to be less than significant since all new construction is already required to comply with the existing seismic standards of the Building Code, which already mitigates any potential significant impact.

Liquefaction is a phenomenon where earthquake-induced ground vibrations increase the pore pressure in saturated, granular soils until it is equal to the confining, overburden pressure. When this occurs, the soil can completely lose its shear strength and enter a liquefied state. The possibility of liquefaction is dependent upon grain size, relative density, confining pressure, saturation of the soils, strength of the ground motion and duration of ground shaking. In order for liquefaction to occur, three criteria must be met: underlying loose, coarse-grained (sandy) soils; a groundwater depth of less than about 50 feet; and a nearby large magnitude earthquake. The susceptibility of soil to liquefy tends to decrease as the density of the soil increases and the intensity of ground shaking decreases. Strong ground shaking will also tend to densify loose to medium dense deposits of partially saturated granular soils and could result in seismic settlement of foundations and the ground surface at the project site. The Building Code requires that the applicant prepare a soils report for all new structures on the site. The soils reports will set design standards to address any potential negative impact from liquefaction. Since this is already a Code requirement, the impact is considered to be less than significant.

¹¹ Southern California Earthquake Data Center (http://scedc.caltech.edu/significant/whittier.html), March 28, 2018

| CEQA INITIAL STUDY – PLN-17-00145 SEC | TION III – EN | VIRONMENT | AL EVAL | UATION | | | |
|---|---|---|---|--------------|--|--|--|
| | Significant mpact - EIR Analysis Is | Potentially Significant Unless Mitigation acorporated | Less Than Significa nt Impact | No Impact | | | |
| (a4): No impact. Topographically, the property is essentially planar, sloping gently at about a one to two percent grade for water runoff. Elevations in the area are approximately 130 feet above sea level. Overall, the City of Downey has a relatively flat topography and the possibility of landslides is typically unlikely. The project site is not within a potential earthquake-induced landslide hazard zone, and due to the low gradient of the site, seismically induced landsliding is nil. Implementation of the proposed project would not result in the exposure of people or structures to the risk of landslides during a seismic event. | | | | | | | |
| (b): No impact. The project will not result in substantial soil erosion erosion on the project site is low due to the existing planar topograp disturbed area for construction is considered to be minimal and all to | hy of the proje | ct site. Furth | ermore, th | е | | | |
| (d): No impact. Expansive soils are typically composed of certain types of silts and clays that have the capacity to shrink or swell in response to changes in soil moisture content. Shrinking or swelling of foundation soils can lead to damage to foundations and engineered structures including tilting and cracking. The proposed project would comply with current City Code and CBC requirements and would not affect foundations or result in other structural or engineering modifications that could increase exposure of people or structures to risk associated with expansive soils. | | | | | | | |
| (e): No impact. The City of Downey is an urban area that is served tanks are prohibited within the City. | by a sanitary | sewer systen | n. New se | ptic | | | |
| Mitigation Measures: | | | | | | | |
| None Needed | | | | | | | |
| 7. GREENHOUSE GAS EMISSION. Would the project: | | | | | | | |
| a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | | | | | | | |
| b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? | | | | | | | |
| Response: | | | | | | | |
| (a): Less than significant impact. Greenhouse gas (GHG) emissions contribute, on a cumulative basis, to the significant adverse environmental impacts of global climate change. While no single project of this scale could generate enough GHG emissions to noticeably change the global average temperature, it is the combination of GHG emissions from past, present, and future projects that contribute substantially to the phenomenon of global | | | | | | | |

climate change and its associated environmental impacts, and as such, is addressed only as a cumulative impact. Implementation of the proposed project would not substantially contribute to increases of GHG emissions that are associated with global climate change.

A common source of GHG for development sites similar is through the production of electricity to power exerctions of the site. The future new construction will comply with the strict conservation requirements of the

operations of the site. The future new construction will comply with the strict conservation requirements of the California Energy Code, which includes using higher efficiency appliances, windows, and installation. Therefore, the impact is considered to be less than significant.

² Checked on Department of Toxic Substance Control website (http://www.envirostor.disc.ca.gov/public), March 28, 2018

SECTION III - ENVIRONMENTAL EVALUATION CEQA INITIAL STUDY - PLN-17-00145 Potentially Potentially Less Significant Than Significant Impact - EIR Unless Significa Analysis Is Mitigation nt No required Incorporated Impact Impact d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a \boxtimes stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site? e. Create or contribute runoff water which would exceed the \times capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? Xf. Otherwise substantially degrade water quality? g. Place housing within a 100-year flood hazard area as \boxtimes mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? \Box \boxtimes h. Place within a 100-year flood hazard area structures which would impede or redirect flood flows? Expose people or structures to a significant risk of loss, Xinjury or death involving flooding, including flooding as a result of the failure of a levee or dam? \boxtimes Inundation by seiche, tsunami, or mudflow? Response: (a through f): No impact. The agency with jurisdiction over water quality within the project area is the Los Angeles Regional Water Quality Control Board (LARWQCB). The Clean Water Act (CWA) prohibits the discharge of pollutants to waters of the United States from any point source unless the discharge is in compliance with a National Pollutant Discharge Elimination System (NPDES) permit. In accordance with the CWA, the construction is required to comply with the NPDES, and as such, would not cause any violations associated with water quality standards or water discharge requirements. (g through h): No impact. Pursuant to Flood Insurance Rate Map, Flood Zone Map No. 06037C1810F, effective on September 26, 2008, the project site is within Flood Zone X, which is not a 100 year flood zone. Due to the nature of the proposed project, it would not impede or redirect flood flows within the area and does not include a housing component. (i): No impact. The subject site is located between the Rio Hondo Channel/ Los Angeles river and the San Gabriel river. According to the Vision 2025 FEIR, these flood control channels has been designed to meet or exceed the discharge capacity for a 100-year flood. 13 Due to the distance between the project site and the levees constructed for these rivers, there is no possibility for there to be an impact. (j): No impact. The City of Downey is relatively flat and is not located near a dam, lake, or ocean, and therefore, inundation by seiche, tsunami, or mudflow is not anticipated. Moreover, tsunamis and seiches do not pose hazards due to the inland location of the site and lack of nearby bodies of standing water.

| CEQA INITIAL STUDY – PLN-17-00145 SECTION III – ENVIRONMENTAL EVALUATIO | | | | | | |
|---|---|--|---|--------------|--|--|
| | Potentially Significant Impact - EIR Analysis Is required | Potentially Significant Unless Mitigation Incorporated | Less Than Significa nt Impact | No Impact | | |
| 3) Schools? | | | | \boxtimes | | |
| 4) Parks? | | | | \boxtimes | | |
| 5) Other public facilities? | | | | \boxtimes | | |
| Response: | | | | | | |
| (a.1 through a.5): No impact. The City of Downey is an urban full service community, providing its own police service, fire protection, library system, and park and recreation services. The Downey Unified School District provides all public education in the area. These services will not be impacted by construction and operation of the project. This project will not induce growth and will only create minimal new jobs in the area. As such, no additional services will be required with the approval of this project. Mitigation Measures: None Needed | | | | | | |
| 15. RECREATION. | | | | | | |
| a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | | | | | | |
| b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? | | | | | | |
| Response: | | | | | | |
| (a): No impact. The future residential development associated with the proposed land use designations will only add twelve (12) units to the area. Depending on the future plans, the amount of people living in this new development will not have a significant impact on the existing recreational facilities that exist within the City. Furthermore, the City of Downey will collect Park in lieu fees, which covers the cost of impacts from new residential developments. | | | | | | |
| (b): No impact. The project does not include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. No impact would occur. | | | | | | |
| Mitigation Measures: | | | | | | |
| None Needed | | | | | | |
| 16. TRANSPORTATION/TRAFFIC. Would the project: | | | | | | |
| Cause an increase in traffic which is substantial in relation the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or | | | \boxtimes | | | |
| | | | | 2 0040 | | |

Response:

Result in inadequate parking capacity?

g. Conflict with adopted policies, plans, or programs supporting

alternative transportation (e.g., bus turnouts, bicycle racks)?

(a and b): No impact. The proposed land use changes could result in future residential development. Downey Avenue is a fully-serviced, four-lane street that has a significant amount of multiple-family residential developments at a higher density than the projected future development. Additionally, any future residential development must comply with the minimum parking requirements of two-cars per unit. As such, despite an uptick in the amount of traffic travelling along Downey Avenue, it is unlikely to have a significant adverse impact on the area.

 \boxtimes

- (c): No impact. The project will not alter existing air traffic patterns or create additional air traffic.
- (d): No impact. The future development associated with these land use changes will not create hazards or incompatible uses.
- (e): No impact. All future development must comply with the California Fire Code and will therefore, have adequate emergency access.
- (f): No impact. All future development of this site must comply with the minimum parking requirements for R-2 development as listed within the Downey Municipal Code. Therefore, inadequate parking will not be an issue.
- **(g): No impact.** The changes in land use associated with these sites will not conflict with the City of Downey's Master Bike Plan. The 2015 Bike Master Plan indicates that Downey Avenue is to have a Class II bike lane with a road diet. As this has already been in effect, the future development of these sites will not impact this.

Mitigation Measures:

| a. | Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | | | | | |
| b. | Does the project have impacts that are individually limited, but cumulatively considerable? "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? | | | | | |
| C. | Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? | | | | | |
| Response: | | | | | | |
| (a): No impact. As described throughout the preceding checklist sections, the proposed project will not degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. | | | | | | |
| (b): No impact. Based on the analysis contained within this Initial Study, the proposed project is not anticipated to create impacts that are individually limited, but cumulatively considerable. | | | | | | |
| (c): No impact. Based on the analysis contained within this Initial Study, the proposed project will not have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly. | | | | | | |
| Mitigation Measures: | | | | | | |
| No | one Needed | | | | | |
| | | | | | | |
